ENTERPAD USER GUIDE

Congratulation for buying Canadialog Enterpad!

Introduction

Enterpad is a programmable keyboard that can be use to perform simple or complex tasks by pressing only one key. These tasks that we will call macros in this user guide can perform a complex keyboard shortcut, open a program, write long block of text based on your needs, open secure Web site, Etc.

Enterpad can host up to 460 macros. keys of Enterpad can perform up to 4 macros. Each key of P120 Enterpad can reproduce one or more keyboard regular keys. When pressing a key of Enterpad, it's possible to reproduce letters, numbers or any function key. With configuration software, it's possible to create an instruction file that will handle macros and transfer this file in Enterpad internal memory. Enterpad is also compatible with AutoHotKey to perform more complex macros. However, the AutoHotkey script needs to be install on your computer hard disk.

Physical description of Enterpad

Enterpad is rectangular. An USB cable is attached behind it. Please do not try to remove the USB cable otherwise the warranty will be voided. If Enterpad is placed on a flat surface, the top of Enterpad is slightly raised compared to bottom. Enterpad must be placed on a flat surface and the USB cable must be located on the back of the upper left corner. On top of Enterpad, you'll find a plastic sheet with small dots if you buy the adapted version from Canadialog. Each dots correspond to a key of your Enterpad. It's also possible to place a regular sheet of paper under the plastic sheet to add visual indications. To insert a regular sheet, raise the plastic sheet using the space for this on the opposite side of the USB cable.

A small speaker is also integrated in the Enterpad. This speaker allow Enterpad to play beep. After pressing a key, you'll hear a beep that will confirm the transmission of your action to the computer. A beep can also be hear in the following situations: when connecting the Enterpad to your computer to confirm establishment of link between Enterpad and your computer, during internal memory update process, if a technical problem occur, Etc. The speaker is located under the Enterpad in the upper right corner. You can observe a small round whole. Beep volume can be adjust. Please note that it's also possible to turn off beep if needed by contacting Canadialog technical support.

Enterpad keys are numbered and place this way. Each rows contain 10 keys and each columns 12 keys. First row on top contains from left to right keys from 1 to 10. Second row contains keys from 11 to 20. The key located in the bottom right corner is key number 120. Shift key is a special key located in the bottom left corner and this key is

named 111. This key allow you to activate secondary macro of a key. You'll need to press and hold shift key when pressing key that contains a second macro.

How to install basic template offer by Canadialog

To user Enterpad, you'll need to program your own macros or install our basic template that include over than 50 predefine macros. To download and install our template, please go to http://enterpad.canadialogstore.com. Before launching installation, please make sure that your Enterpad is connected to your computer. If your computer never communicate with your device, please wait a couple of minutes before launching the installation. Windows needs to detect and install the driver of the new device. After launching the installation, please follow instructions on your screen.
